Design Document

Project description: Our website is a game that allows the user to rescue animals, restore their health, and release them back into the wild. Users can earn food (to restore animals' health) and money (to buy new enclosures) through trivia questions. The amount of animals a user is currently rehabilitating is dependent on the amount of enclosure space they have, and their history can be found on the profile page.

Program Components

** - extra components

Flask Application

- Handles routing for pages
- Handles GET and POST requests
- Manages user session data for login/logout
- Renders HTML templates

External API

- Trivia

Front-End Framework (Tailwind)

- Grid layout for homepage

Custom CSS and JS

- Animal animations
- Timers for feeding

Pages

Home page

- Only visible for logged in users, if not authenticated, send straight to login page
- Navbar will contain a logout, profile, rewards, and wild button
- Instructions on how to use the site and trivia game linked

Login Page

- Navbar
- Asks for username/password and matches it to what is contained in users
 - Takes the username and compares it to existing users
 - If username does not exist **OR** if username exists but the password does not match the one attached to the corresponding user, output ‘username or password incorrect’
 - If username exists AND password matches, sends the user back to the home page and adds the username to the session
- Contains a button to create an account (sends to registration page)
 - Once account is created, adds the new user to the user base and signs them in (sending them to home page and adding info to the session)

Register Page

- Navbar
- Username, password, and confirm password form response box.
 - If submit is pressed and it does not pass the comparison check, the page will display a “passwords do not match” message
 - If submit is pressed and the username is the same as another one (case sensitive), the page will display a “username taken” message
 - If submission passes all checks, user will be sent back to the login page and the new user will be added to the user base
- Includes a button (back button) that sends the user back to the login page in navbar

Profile Page

- Navbar
- Displays user information (username)
- Displays rescued animals (current and past)
 - Uses animals to find creatures with right user id
 - Displays a grid of animals and displays details of an animal upon clicking to the side

Enclosure Page

- Navbar
- Contains three rescued animals
- Route ending dependent on enclosure number
- **Can buy new enclosures (money earned after returning animal to environment)

Wild Page

- Navbar
- Randomly generated animals (healthy and not healthy)

- Can click animals for pop-up of information
 - Can capture animal (capture button in pop-up if unhealthy)
- **Different habitats (water, grass, ice, desert)

Rewards Page

- Navbar
- Displays trivia/game to earn bags of feed **and medicine
 - Uses API
